BIOMASS ENERGY & AI

Reforestation in Mitsue

Village Mayor Conversation — Talking Points

Version	v2.1
Date	2026-07-21
Author	Rob Oudendijk

Village Mayor Conversation — Talking Points

Meeting with Mitsue Village Mayor (御杖村長)

For Rob's preparation — confidential

Important Context for This Meeting

This is **not a first introduction** of either Rob or the project. You are building on:

- An earlier informal meeting with the **Vice Mayor (副村長)**, in which you presented a draft concept of the small-scale AI data center using the former Sugano Elementary School (now Mitsue Taiken Koryukan). Biomass, biogas, and forestry components were **not** mentioned at that first meeting.
- Earlier informal meetings with the **local forestry group (御杖村森林組合)**, exploring how they work and whether collaboration is possible — a relationship that has since continued.

Current knowledge state (as of July 2026) — read carefully before the meeting

- **The Vice Mayor knows more than the mayor:** he is now aware of **both the AI data center and the reforestation plans**. He is your most-informed ally in the village hall.
- **The Mayor officially knows none of the recent developments** — not the 2026-07-08 village-hall meeting, and not the items below. The staged reveal in this script (data center → then forest + energy) still holds for *him*.
- **Neither the Mayor nor the Vice Mayor knows about (a) the active partnership with an outside reforestation NGO, or (b) the ongoing meetings with the forestry co-op.** Do **not** name the NGO or describe the co-op relationship as advanced — in writing or unprompted. Keep to "conversations with the local forestry group" and "our expert reforestation partners." Surfacing these too early risks the overstatement/leak problem you have guarded against.

This changes the meeting in three meaningful ways:

1. **The mayor likely already knows about the AI data center idea** — the vice mayor will almost certainly have briefed him. Don't pretend it's new.
2. **You are now broadening the picture** — adding the biomass CHP energy (fuelled by sugi thinnings), complementary solar/EV, and forestry components transforms a single-building proposal into an integrated rural sustainability project. This is the most important shift to communicate.
3. **You have already shown respect** for proper village process by approaching the vice mayor first and the forestry group separately. That groundwork is in your favor — let it work for you.

Strategic Goal of This Meeting

The goal is to:

1. **Acknowledge and build on** the previous conversation with the vice mayor
2. **Reveal the broader integrated picture** — energy, forestry, and the data center as one project
3. **Listen carefully** to the mayor's reaction now that the picture is fuller
4. **Gauge his appetite** for the village taking a more active role

5. **Seek his guidance** on next steps

The tone should still be consultative, not promotional, but you can be more substantive than in a true first meeting. Aim for **roughly 50/50 listening and talking** — more talking than a cold introduction would warrant, but still listening more than presenting.

Before the Meeting

- **Request through the vice mayor's office if possible** — this acknowledges the proper chain and signals respect to both
 - **Bring a small, thoughtful gift** (お土産)
 - **Wear formal attire** — suit and tie
 - **Bring Yuka or your Japanese co-founder if available** — strongly recommended given the broader scope of the discussion
 - **Bring one simple visual** — a single sheet showing the three integrated elements (forest, energy, former Sugano school). NOT a full proposal, but a one-page concept that helps explain the broadening picture. Something visual is helpful when you're describing how three things connect.
 - **Take notes after the meeting, not during**
-

Opening (First 5 Minutes)

Suggested Opening

After the standard greetings and exchange of cards:

"村長、お忙しい中、お時間をいただきまして誠にありがとうございます。半年ほど前に副村長にお話を伺っていた件に関連して、その後の進展を村長にもご報告し、ご相談したく、本日参りました。"

("Mayor, thank you very much for your time. Regarding the matter I discussed with the Vice Mayor about six months ago, I have come today to report on subsequent developments and to seek your guidance.")

Acknowledge the Vice Mayor

Make clear you understand the proper protocol and that the vice mayor has been your point of contact:

"副村長には、御杖小学校の活用について、ささやかな構想をお話しさせていただきました。その後、私自身もう少し考えを深めまして、最初にお話しした内容よりも広がりのある構想になってまいりましたので、村長にも直接ご相談したく存じた次第です。"

("With the Vice Mayor, I shared a modest concept regarding the use of the former Sugano Elementary School (Mitsue Taiken Koryukan). Since then, I have developed my thinking further, and the concept has broadened beyond what I first discussed. I therefore wished to consult with you directly, Mayor.")

This phrasing accomplishes several things at once: it signals respect for protocol, it admits the picture has changed, and it positions the broader plan as a natural development rather than a sudden pivot.

Listen Phase (Next 10–15 Minutes)

Even though you have history here, still begin with listening. The mayor's perspective on what's happened in the village in the months since your last contact is valuable.

Opening Questions

1. "副村長から、当時の構想について何かお話を伺っていらっしゃいますでしょうか?" (*"Has the Vice Mayor mentioned anything to you about that earlier concept?"*)

This lets him reveal what he already knows without you guessing.

2. "この半年の間に、村として閉校舎の活用について何か動きはございましたでしょうか?" (*"Has there been any movement at the village level regarding use of the former Sugano school (Koryukan) in the past six months?"*)

Important — there may be other proposals in play, or a new direction you don't know about.

3. "杉の人工林や森林管理について、最近何か検討事項はございますか?" (*"Are there any recent discussions about cedar plantations or forest management?"*)

Tests whether your forestry group conversations have circulated, and whether the village has its own forestry initiatives in motion.

4. "村内のEV充電設備について、現在どなたが管理していらっしゃるのでしょうか? 菅野の国民健康保険診療所に200Vの充電器があるのを拝見しました。" (*"Regarding EV charging facilities in the village — who currently manages them? I noticed there is a 200V charger at the National Health Insurance Clinic in Sugano."*)

The village already has at least one EV charger (the clinic unit, grid-powered). Find out **who owns/operates it** before proposing more — so the project's charging idea (at the Koryukan, powered by local biomass CHP) is positioned as *complementing* existing infrastructure, never displacing it.

5. "村の指定避難所について、現在どちらの施設が指定されておりますでしょうか? 姫石の湯のような施設は、災害時の拠点として活用されるお考えはございますか?" (*"Which facilities are currently designated as evacuation shelters? Is there any thought of using a facility like Himeishi-no-Yu (Mitsue Onsen) as a base during disasters?"*)

A gentle discovery question that opens the **disaster-resilience** angle. If the onsen were equipped with biomass CHP + battery + island-mode, it could serve as a 防災拠点 — emergency power, heat, hot showers, food, and device charging through landslide/typhoon/heavy-snow outages. Don't pitch it yet here; just learn the village's shelter setup and priorities, then connect it later if he's receptive.

What to Listen For

- **What the vice mayor relayed (or didn't)** — gives you a sense of how the earlier meeting was received
- **Any other proposals for the former Sugano school** — competing ideas you need to know about
- **Existing forestry plans** — your project must align with, not compete against, village forestry direction
- **Who runs existing EV charging** — the clinic's 200V charger is grid-powered; learn who manages it and whether the village wants to expand. Our angle: local CHP-powered charging that keeps working in a blackout — a complement, not a replacement.
- **Designated shelters & disaster priorities** — is Himeishi-no-Yu (or the Koryukan) a 指定避難所? What worries the village most (landslides, typhoon flooding, snow isolation)? This tells you

whether the renewable-powered 防災拠点 angle will resonate — and it's a strong funding hook (decarbonization + 国土強靱化).

- **The mayor's tone** — engaged? cautious? deferring? Each tells you something

The Bridge — Revealing the Broader Picture (10–15 Minutes)

This is the heart of the meeting. You are now connecting the AI data center concept (which he likely already knows) with the forestry and energy components (which he likely doesn't).

Suggested Framing

"副村長にお話しした際は、閉校舎の活用という一点に絞った構想でした。ですが、その後、地元の林業の方々ともお話をする機会がございまして、考え方が大きく変わってまいりました。"
("When I spoke with the Vice Mayor, the concept was focused only on the use of the former Sugano Elementary School. However, since then, I have had the opportunity to speak with the local forestry group, and my thinking has changed significantly.")

Introduce the Three Connected Elements

Now you can be more substantive. Use your one-page visual if helpful.

"現在は、3つの要素が繋がった、より統合的な構想として考えております。"
("I am now thinking of it as a more integrated concept, in which three elements are connected.")

"1つ目は、杉の人工林を、長い時間をかけて在来種に戻していくこと。これは林業の方々ともお話ししたところ、関心を持っていただける可能性があると感じております。"
(First, gradually returning sugi plantations to native species over a long period. From my conversation with the forestry group, I sensed there may be openness to this.)

"2つ目は、杉林の間伐材を燃料とする小規模なバイオマス熱電併給（CHP）システムで村の電力と熱を生み出すこととでございます。森が村を動かす循環型のエネルギーであり、これを太陽光発電とEV充電が補完いたします。村にはすでに道の駅（神末）に急速充電器があり通過交通には対応しておりますが、住民が日常的に集まる場所での充電や、停電時にも使える地産電源による充電は、まだ手薄でございます。私どもはそこを補完したいと考えております。さらに、バイオマスCHPは24時間稼働する地域電源として停電時のバックアップともなり、村の重要施設を守ります。蓄電池の設置についてはフィージビリティスタディで判断いたします。"

(Second, generating the village's electricity and heat from a small biomass combined heat and power (CHP) system fuelled by sugi forest thinnings — a circular energy economy where the forest powers the village, complemented by solar and EV charging. The village already has a fast charger at the roadside station (Kozue) for passing traffic; what is still thin is everyday community charging where residents gather, and charging that keeps working in a blackout via local power — that is the gap we would complement. The biomass CHP also provides 24/7 on-site backup power during typhoons and heavy snowfall. Battery storage to be confirmed by feasibility study.)

This framing matters: clearly explaining that the biomass system is a small, village-scale unit fed by forest thinnings — not a large industrial plant — and that solar and EV charging complement it, is important for setting realistic expectations.

"3つ目は、そのエネルギーを使って、副村長にお話しした閉校舎の活用構想を支える、というつながりでございます。"
(Third, using that energy to support the former Sugano school-use concept I shared with the Vice Mayor — these elements connecting together.)

Acknowledge the Magnitude of the Shift

Be honest that this is a meaningful expansion of what was previously discussed:

"副村長にお話しした時よりも、はるかに大きな構想となっております。それゆえに、村長のお考えを直接伺いたく、お時間を頂戴した次第です。"

("This is a much larger concept than what I discussed with the Vice Mayor. For that reason, I wished to hear your thoughts directly, Mayor, which is why I have come today.")

Frame the Long Horizon

This is also the right moment to introduce the 25-year scale, because it changes the nature of the ask:

"また、時間軸につきましても、25年という長期的な取り組みとして考えております。1年や2年で何かを完成させるという話ではなく、世代を超えて村に貢献できる形を、ゆっくりと築いていきたいと考えております。"

("Regarding the timeline as well, I am thinking of this as a 25-year long-term initiative. This is not about completing something in one or two years, but about slowly building a form that can contribute to the village across generations.")

The 25-year framing is itself reassuring to a rural mayor — it signals you are not trying to extract value quickly, but to commit for the long term.

Connect to the Village's Own Renewable Energy Plan

This is a strong, consultative note to strike — the project executes the village's own published strategy, not an outside idea. Keep the tone humble: you are offering to help carry out the plan, not telling the village what to do.

"御杖村が令和7年にまとめられた『再エネ導入最大化計画』を、私も拝見いたしました。私どもの構想は、村がすでに掲げておられるその計画を、長い時間軸で具体的に実行する一つの形になり得ると考えております。"

("I have read the village's 'Plan for Maximum Introduction of Renewable Energy' (2025). I believe our concept can be one concrete way to carry out, over a long horizon, the plan the village has already set out.")

"計画に示されている『村内に1拠点のレジリエントな再エネ設備』、公共施設へのEV充電器の優先整備、そして森林によるCO₂吸収・J-クレジット —— これらは、私どものデータセンター・バイオマスCHP・森林再生と、ほとんどそのまま重なります。"

("The plan's targets — one resilient renewable-energy site in the village, priority EV chargers at public facilities, and forest CO₂ absorption / J-Credits — overlap almost exactly with our data center, biomass CHP, and forest restoration.")

"また、村が計画づくりの段階で環境省の支援を受けられたことで、次の段階である『地域脱炭素移行・再エネ推進交付金』の対象になり得ると伺っております。これは官民連携で村に交付される仕組みで、太陽光や蓄電池などの整備費の3分の2から4分の3が補助され得ると理解しております。私どもは、その運営を担う側としてお役に立てればと考えております。"

("I understand that because the village received MoE support at the planning stage, it may now be eligible for the next step — the Regional Decarbonization Transition & RE Promotion Grant — which is paid to the village through public-private partnership and can subsidize two-thirds to three-quarters of solar/battery costs. We would be glad to serve as the operating partner for that.")

The mayor will appreciate that you have read the village's own document and that the funding can flow **through the village** rather than around it.

The Local Supply Chain Already Exists (菅野 cluster)

A quietly powerful point to land — at **vision level only**. The message: this project does **not import a new industry**; it **activates one the village already has**. The forest, the thinnings, the cooperative, and working sawmills are all already here, mostly in 菅野 within walking distance of each other. The project simply connects them into a value chain that currently leaks away.

"実は、この構想に必要な要素の多くは、すでに村の中、特に菅野に揃っております。森林組合、製材所、そして間伐材そのもの——これらを新たに外から持ち込むのではなく、すでにあるものを結び直し、村の中で価値が循環する形にしたいと考えております。"

("In fact, many of the elements this concept needs are already here in the village — especially in Sugano: the forestry cooperative, sawmills, and the thinnings themselves. Rather than importing something from outside, we want to reconnect what already exists so that value circulates within the village.")

Why this resonates with a rural mayor: it frames the project as **endogenous development** (内発的発展) — local people, local materials, local processing, local jobs — not an outside developer extracting value. It also signals that the **fuel and processing capacity are realistic**, because they are visibly present, without committing to any specific company.

Hold back (do NOT raise yet): any named business, the idea of jointly setting up a fuel chipper, or specific supply deals. Those are downstream of the mayor connection and belong to a later, village-hall-led conversation. Here, keep it to "the pieces are already in the village."

Optional gentle listening question (only if the forestry thread is flowing):

"村内の製材・木材加工については、現在どのような事業者さんがいらっしゃるのでしょうか? 勉強のために伺えればと存じます。"

("Regarding sawmilling and wood processing within the village — what operators are currently active? I would like to learn, for my own understanding.")

This lets **the mayor** name the local players, rather than you appearing to have already targeted anyone.

The Koryukan — Lead With the Village's Finances, Not Our Data Center

Do NOT open this topic with "we want to put a data center in the Koryukan." The 2026-07-08 village-hall meeting already classified an earlier Koryukan use as a private initiative — so the persuasive order is to start from the *village's* interest, then let the data center appear as the solution. Sequence:

1. **Raise the cost problem gently.** Our analysis suggests the Koryukan (former Sugano school) may currently be running at a cost to the village. Offer the written calculation if he wants to see it — **bring** `koryukan_datacenter_financial_case.md` but do not push it; only show it if he's interested.

"差し出がましいのですが、体験交流館の運営について私どもなりに試算をしてみましたところ、現状では村の御負担になっている可能性があるように見受けられました。もしご関心がありましたら、計算の資料をお持ちしております。"

2. **Ask about the ECC exception precedent.** You understand the ECC (グローバル人材育成塾) obtained an exception from the 9:00–17:00 rule via a village ordinance (議案第2号, March 2019). Ask how that was done, and whether a similar route could apply to a small data-center room.

"以前、グローバル人材育成塾さんが9時から17時までの利用時間の例外を、条例という形で認められたと伺っております。小さなデータセンターの部屋についても、同様の形をご検討いただくことは可能でしょうか。"

3. **Show the turnaround — and stress the small footprint.** We need only **one classroom out of the many** in the building; the rest stays fully available for the village's existing uses. That single room, run as a small 24-hour/365-day data center, could make the facility net-positive — room-rental income, waste-heat reuse (avoided kerosene heating), and use of otherwise-idle hours, without competing with existing daytime use.

"必要なのは、たくさんある教室のうちの**一室だけ**でございます。他の部屋はこれまで通り村の御利用にそのまま残ります。その一室を、24時間365日稼働する小さなデータセンターとして活用できれば、賃料収入、排熱の再利用による暖房費の削減、そして現在使われていない時間帯の活用により、むしろ収支をプラスに転じられる可能性があると考えております。"

4. **Only then, condition the site on the exception.** If such an exception is possible, say you would like to consider the Koryukan as a candidate site for the small data center — framed as conditional, not assumed.
5. **Signal you are not fixated on the Koryukan.** You are also exploring **other sites — unused factory buildings near the biomass production area** — and profits from those would be **shared with the forestry team (御杖村森林組合)**. This shows flexibility and that the village's building is one option, not a demand.

"なお、私どもは体験交流館だけにこだわっているわけではございません。バイオマスの生産地に近い、使われていない工場なども候補として検討しており、そこで得られる収益は御杖村森林組合さんと分け合う形を考えております。"

Soft Ask (Last 10 Minutes)

Because of the prior groundwork, your ask can be slightly more concrete than in a true first meeting.

What You Are Asking For

1. **The mayor's own reaction** — does the broadened picture make sense to him?
2. **Guidance on whom to consult next** — which 自治会 leaders, council members, prefectural contacts
3. **An indication** of whether the village would be open to formal collaboration in due course (NOT a commitment, just openness)
4. **Whether he prefers** further communication to go through the vice mayor or directly to him
5. **Whether he'd support a distinct, additional funding stream for 御杖村森林組合 (Mitsue Kanko)** — new machinery and expanded workforce — so the co-op can carry out native-broadleaf **reforestation** specifically, separate from the thinning work already funded through 施業放置林整備事業, with species selection and site priority guided by our expert reforestation partners

6. **Whether the village would back — or co-present in — forestry recruitment outreach** as a direct answer to the worker-shortage he named (see record below). Concretely: presenting the project as a *reason to enter forestry here* to three channels — ①奈良県フォレスターアカデミー（吉野）, ②奈良県林業機械化推進センターの林業就業支援講習, ③森林の仕事ガイダンス／ならウッドジョブ — with 近処里英さん（御杖村森林組合）と我々が共同で説明（雇用主＋構想）. The co-op is a member of the 奈良県森林組合連合会, so ②③ are a natural insider route. Ties to his own 協力隊「応募ほぼゼロが2年連続」remark — a concrete fix, not just a complaint

Citing the Village's Own Record (use if he's receptive)

The council's own minutes (Dec 2020) already state the constraint this project addresses — the mayor said it himself, independent of this project:

「本村においてはその受皿となる林業経営体が少なく、また携わる林業従事者も不足しており、森林所有者の意向に対して受皿が追いついていないのが現状です」 ("...few forestry operators to serve as the receiving body, and forestry workers are also in short supply — the receiving capacity is not keeping up with what forest owners want.")

And: everything the village currently funds (森林環境整備基金, 施業放置林整備事業) pays for **thinning** of existing plantations — none of it funds **new planting**. Frame the ask as a second, distinct funding stream for a gap the village has no current mechanism for, delivered by the same co-op the village already trusts and contracts — not a competing or replacement program:

"村の森林環境整備基金や施業放置林整備事業は、既存の杉・檜林の間伐を支えるものと理解しております。私どもがご提案したいのは、それとは別の、新たな在来広葉樹の**植林**のための資金の流れでございまして、既存の事業を置き換えるものではございません。実施は村がすでに信頼し契約されている御杖村森林組合に担っていただき、樹種選定と優先箇所については、専門の再造林パートナーの知見を踏まえて進める形を考えております。"

Suggested Phrasing

"村長から見て、このような統合的な方向性に何かご懸念がございましたら、率直にお聞かせいただきたく存じます。また、もしお進めしてよろしいようでしたら、次にどなたにご相談すべきか、ご助言いただければ幸いです。"

("If, from the Mayor's view, there are any concerns about this integrated direction, I would appreciate your candid opinion. If it would be acceptable to proceed, I would be grateful for guidance on whom to consult next.")

"また、今後のご相談につきましては、引き続き副村長を通じてさせていただくのか、村長に直接ご連絡差し上げるのが適切か、ご教示いただけますと幸いです。"

("Regarding future discussions, I would also welcome your guidance on whether I should continue through the Vice Mayor, or whether direct contact with you, Mayor, would be appropriate.")

This last question is important — it explicitly respects the chain of command and lets him define how the relationship should work going forward.

Possible Mayor Reactions and Responses

Reaction A: "Yes, the Vice Mayor mentioned this. Interesting that it has grown."

Your response: Express gratitude, acknowledge the broadening:

"おっしゃる通り、当初よりはるかに広がっております。だからこそ、慎重にご相談したいと考えております。"

Reaction B: "I had not heard about this from the Vice Mayor."**Your response:** Don't appear surprised or critical. Simply explain:

"副村長にはささやかな構想としてご相談しただけですので、村長にまでお伝えいただくほどの段階ではなかったかと思います."

This protects the vice mayor and avoids any awkwardness.

Reaction C: "The forestry group has already mentioned your visit to me."**Your response:** Good — your respect for protocol has been noticed. Acknowledge it:

"そうでしたか。皆様にお話を伺いながら、勉強させていただいている段階でございます。"

Reaction D: "This is much bigger than I expected. We need to think carefully."**Your response:** This is a reasonable and welcome reaction. Reinforce patience:

"おっしゃる通りでございます。私どもも、慎重に時間をかけて進めるべき構想だと考えております。何年もかけて、段階的に進めていきたいと存じます。"

Reaction E: "There may be conflicts with [other plan / interests]."**Your response:** Listen carefully. Don't argue. Ask:

"ご懸念の点を、もう少し具体的にお聞かせいただけますでしょうか? それを踏まえて、構想を見直したいと存じます。"

This is critical information you can only get by listening.

Reaction F: "We need to involve [other person/body] now that this is bigger."**Your response:** Welcome this. The mayor pointing you to additional stakeholders is a positive signal — he's helping you navigate the village.

"ご教示いただきありがとうございます。村長のご助言に従って、適切な順序でご相談を進めてまいります。"

If the Mayor Asks Substantive Questions

The mayor may probe the practical mechanics. Full bilingual answers live in

[mitsue_ga_briefing.md](#). Compressed answers for live use:

"What is the energy plan? How do biomass CHP, solar, and EV charging work together?"

"村の主たる電源は、杉林の間伐材を燃料とするバイオマス熱電併給（CHP）システムで、24時間のベースロード電力と熱を生み出します。これを補完する太陽光発電を校舎の屋根に設置し、EV充電ステーションと組み合わせて稼働させます。バイオマスとソーラーの電力でデータセンターを稼働させ、EV充電ステーションに供給します。蓄電池の設置については第2段階のフィージビリティスタディで判断いたします。"

(The village's primary power is a biomass CHP system fuelled by sugi forest thinnings, providing 24/7 baseload electricity and heat. Complementary solar panels on the former Sugano school roof and EV charging stations round it out. Together they power the data center and support village EV charging. Battery storage to be confirmed by Phase 2 feasibility study.)

"What is the EV charging plan?"

"村にはすでに診療所などに充電器がございますが、いずれも系統電源によるものと存じます。私どもは、旧菅野小学校（体験交流館）に2〜4台から始め、村の住民・保護者・教職員・来訪者に開放いたします。違いは電源でございまして、近隣のバイオマスCHPによる地産電力で動かす

ため、停電時にも充電が可能です。EV普及に合わせて段階的に増設し、充電料金は施設維持費の一部に充当いたします。"

(The village already has chargers — e.g. at the clinic — but these run on grid power. We would start with 2–4 chargers at the former Sugano school (Koryukan), open to residents, parents, teachers, and visitors. The difference is the power source: ours run on local biomass-CHP electricity, so they keep working during a blackout. Scaling up as EV adoption grows; charging fees contribute to facility operating costs.)

"Why is a data center necessary?"

"データセンターは24時間365日稼働するため、同じく連続稼働するバイオマスCHPと自然に整合する安定した需要先となり、バイオマスCHPと太陽光への投資を経済的に成立させます。これがないと、農村のエネルギー事業は財務的に成立しないのが通例でございまして、データセンターはEV充電や停電レジリエンスを可能にするエネルギー設備投資を正当化する鍵でございします。"

(The data center provides 24/7 baseload demand that pairs naturally with the continuously running biomass CHP and makes the biomass and solar investment economically viable. Without an anchor offtaker, rural energy projects typically fail their financials. The data center justifies the energy infrastructure investment that enables EV charging and blackout resilience.)

"We already have solar panels in the village. Why do we need more?"

"既存の太陽光設備はFITで国の系統に売電しており、村の直接利用や停電対策には活用されておりません。本プロジェクトの太陽光は補完的な役割であり、主たる電源は杉間伐材によるバイオマスCHPでございします。地産地消型のシステムとして、24時間のベースロード電力・EV充電・停電バックアップという既存設備にはない機能を提供いたします。"

(Existing solar sells to the national grid via FIT and does not provide local-use benefits or blackout protection. In this project solar is complementary; the primary supply is biomass CHP from sugi thinnings. The system is designed for local consumption — providing 24/7 baseload power, EV charging, and backup power that existing installations cannot.)

"Will benefits really take 25 years?"

"25年は森林再生の生態的な期間でございします。村への具体的な恩恵はもっと早く現れます。1年目で閉校舎の再活用とメディア発信、2年目で山林所有者への伐採収入、3～4年目でEV充電ステーション稼働と停電レジリエンス向け蓄電池設置、4～5年目でデータセンターの地域雇用が始まります。"

(The 25-year horizon applies to forest restoration ecology. Concrete village benefits arrive much earlier — former Sugano school reactivation and media in Year 1, landowner income in Year 2, EV charging stations installed by Year 3–4 (battery storage subject to feasibility study), data center jobs in Year 4–5.)

"How will the energy and EV charging costs be managed?"

"複数の収益源を積み重ねます: EV充電料金、FIT/FIP売電、J-クレジット、そしてデータセンターの収益でございします。さらに、農村エネルギーレジリエンスとEVインフラは経産省・NEDO補助制度の優先対象でございします。数値が見合わなければ無理に進めない段階的な構造としております。"

(Multiple revenue streams stack: EV charging fees, FIT/FIP feed-in, J-Credits, and data center revenue. Rural energy resilience and EV infrastructure are priority areas for METI/NEDO subsidies. Phased structure refuses to proceed if numbers don't work.)

"Is biomass part of the plan?"

"はい、バイオマスが本プロジェクトの**主たるエネルギー源**でございます。杉林の間伐材を燃料とする小規模なバイオマス熱電併給（CHP）システムが、24時間のベースロード電力（主たる出力）と熱（副次的な出力）を生み出します。これを太陽光発電とEV充電が補完いたします。林業部門は、杉人工林を在来種の広葉樹へ転換する生態的な森林再生でございますが、その過程で生じる間伐材がそのままバイオマス燃料となり、森が村を動かす循環型のエネルギー経済を実現いたします。間伐は森を健全に戻すと同時に燃料を生み出すのでございます。蓄電池の設置についてはフィージビリティスタディで判断いたします。"

(Yes — biomass is the project's primary energy source. A small biomass combined heat and power (CHP) system fuelled by sugi forest thinnings generates 24/7 baseload electricity (primary output) and heat (secondary output), complemented by solar and EV charging. The forestry component is ecological restoration — replacing sugi plantations with native broadleaf species — and the thinnings it produces become the biomass fuel, creating a circular energy economy where the forest powers the village. Thinning heals the forest and generates fuel at the same time. Battery storage to be confirmed by feasibility study.)

"How does this relate to the village's renewable-energy plan?"

"御杖村の『再エネ導入最大化計画』は、村が環境省の支援を受けて策定された公式の計画でございます。私どものプロジェクトは、その計画を実行・運営する事業体になり得ます。計画が掲げる『村内1拠点のレジリエント設備』、公共施設へのEV充電優先、森林CO₂吸収・J-クレジットは、私どものデータセンター・バイオマスCHP・森林再生とそのまま重なります。さらに、計画づくり支援（第1段）を完了された村は、次の『地域脱炭素移行・再エネ推進交付金』（第2段、補助率2/3～3/4、官民連携で村に交付）の対象になり得ます。私どもはその運営パートナーとしてお役に立てればと存じます。"

(The village's RE plan is an official, MoE-funded strategy. Our project can be the vehicle that implements and operates it. The plan's targets — one resilient site, priority EV charging, forest CO₂/J-Credits — map directly onto our data center, biomass CHP, and forest restoration. Because the village completed the planning grant (step 1), it is eligible for the 交付金 (step 2): a 2/3-3/4 subsidy paid to the village via public-private partnership. We would serve as the operating partner. See [mitsue_village_re_plan_alignment.md](#).)

Positioning under the village's 5-enterprise startup program

If the conversation turns to village policy or youth retention, signal alignment with the village's own startup-subsidy framework:

"村が掲げておられる『5年で5社の新規事業創出』の方針とも、本プロジェクトは整合しております。NPO本体に加え、林業部門・EV/エネルギー事業部門などを将来的に事業会社として独立させることも視野に入れており、それぞれが村の若者定着策の一端を担えればと考えております。具体的な補助制度の適用については、募集要項を確認のうえ、村長のご指導を仰ぎたく存じます。"

(The project aligns with the village's stated "5 new enterprises over 5 years" policy. Beyond the NPO itself, we envisage spinning forestry operations and EV/energy services into separate operating companies over time, each contributing to the village's youth-retention strategy. We would like to confirm subsidy eligibility against the actual 募集要項 under the mayor's guidance.)

If the mayor asks something not on this list, it is better to say "村長、その点は専門家とともに改めて整理してご報告させていただきとう存じます" ("Mayor, allow me to come back to you on that point with our specialists") than to improvise. Promising to follow up is more credible than guessing.

Closing — Confirm the Information Disclosure Request (情報公開請求)

At the **very end** of the meeting, as a brief, polite housekeeping point, confirm receipt: on **2026-07-13** you sent, via Furitani-san, an **Information Disclosure Request addressed to the Mayor of Mitsue Village**. Simply ask whether it reached him — do not press on content; this is only to confirm it arrived and is in process.

"最後に一点、恐れ入ります。7月13日に、古谷様を通じて、村長宛ての情報公開請求をメールにてお送りいたしました。村長のお手元に届いておりますでしょうか。もしまだでしたら、改めてお送りいたします。"

("One last small point, if I may. On July 13th I sent, via Furitani-san, an information disclosure request addressed to you, Mayor. Has it reached you? If not, I would be glad to resend it.")

Confirm before the meeting: the recipient's exact name/kanji — our records show **古谷 (Furuya), General Affairs Chief (総務課長)**, which is where disclosure requests are handled; you referred to "Furitani." Verify which is correct and adjust the name above.

Closing — Confirm the Information Disclosure Request (情報公開請求)

At the **very end** of the meeting, as a brief, polite housekeeping point, confirm receipt: on **2026-07-13** you sent, via 古谷 匡敏様 (Furutani; t-furutani@vill.mitsue.lg.jp), an **Information Disclosure Request addressed to the Mayor of Mitsue Village**. Simply ask whether it reached him — do not press on content; this is only to confirm it arrived and is in process.

"最後に一点、恐れ入ります。7月13日に、古谷様を通じて、村長宛ての情報公開請求をメールにてお送りいたしました。村長のお手元に届いておりますでしょうか。もしまだでしたら、改めてお送りいたします。"

("One last small point, if I may. On July 13th I sent, via Furutani-san, an information disclosure request addressed to you, Mayor. Has it reached you? If not, I would be glad to resend it.")

After the Meeting

- **Send a thank-you note within 48 hours** — handwritten if possible, formal Japanese
- **Send a courtesy note to the vice mayor** as well, briefly mentioning that you met with the mayor and acknowledging the vice mayor's earlier helpfulness. This is essential — never let the vice mayor feel bypassed.
- **Wait for the mayor's guidance** before contacting any new figures he mentioned
- **Document everything** in private notes
- **Update the forestry group**, briefly, that you have spoken with the mayor about the broader integrated concept. They should not hear it from someone else.

Key Differences From a Cold First Meeting

Because you have history with the vice mayor and the forestry group, this meeting is different in several ways:

- **You can be more substantive** — the mayor expects you to have developed thinking, not just an idea
- **You must acknowledge the prior contacts** — pretending this is fresh would seem dishonest

- **The "broadening" message is the central insight** — connecting the former Sugano school + forestry + energy is the new information
 - **Your soft ask can be more concrete** — including a question about ongoing communication channels
 - **The protocol of having approached the vice mayor first works in your favor** — let him notice that, but don't oversell it
-

Mental Reminders

- **You are continuing a conversation, not starting one.** Behave accordingly.
 - **The vice mayor is an ally**, not a stepping stone — keep that relationship strong throughout
 - **The forestry group is also an ally** — they are part of your credibility now
 - **Patience signals respect.** Even with prior groundwork, do not push for fast decisions.
 - **You will be remembered for how you behaved**, not what you proposed.
