Mitsue Forest Supply Chain - What We Currently Have

From forest owners to buyers and the future CHP / AI data center. Green = confirmed, grey dashed = unknown or unconfirmed, blue dashed = future.

Version: v1.3 | Last modified: 2026-10-24

Solid box = confirmed fact Dashed grey = unknown / unconfirmed Dashed blue = future (not built) -- Dashed arrow = unconfirmed or proposed

Open questions

1. Village-owned forest (村有林)? Asked 2026-08-05, no answer.

2. Common-use land (財産区・入会)? No Mitsue record; only Tenkawa confirmed.

3. Where does wood go? Yamaguchi to Misugi market; Tokuda to mills and Sakurai market (its own site); coop flows unverified.

4. Who else is active? 10+ independents (his estimate); 山本製材所 (神末) status unknown; Mie-side operators unverified.

5. Does Tokuda cut inside Mitsue, or mostly Mie and Sakurai? Asked Ohba-san 2026-10-09 (awaiting reply).

6. How are operators chosen for village-funded thinning and 村有林? Asked 2026-10-09.

7. Owners: any group or owner-intent survey results? Coop member count and forest area? Asked 2026-10-09.

8. Coop finances: no document seen; "coop in trouble" is a hypothesis only.

9. Onsen wood: which grades and volumes, and from whom besides the coop?

10. B-grade destination (plywood buyer or CHP fuel) sets real CHP fuel volume.

11. Proposals to test with the coop: open-gate yard, shared harvester and who owns it.

Grade split (A 22% / B 54% / C-D 24%) is from a larch study, not Mitsue. Not shown: felling notices (伐採届), 森林経営計画, subsidies and the forest environment tax. Onsen heat cannot be piped from 牛峠工場. Internal working draft.
