

more trees — Discussion Topics & Open Questions

Internal prep list for the ongoing partnership conversation with **more trees** (Ryuichi Sakamoto / Kengo Kuma NGO). First meeting held **2026-07-14** with **Kishi Takuya** (kishi@more-trees.org) and **Miyazaki Yu** (miyazaki@more-trees.org); strong overlap on **reforestation, education, corporate engagement, and sponsorship**.

Working model: more trees takes the *forest / government / replanting* layer; our NGO takes the *biomass CHP + AI data center* layer. Harvested sugi is the interface — our energy+compute revenue funds the clearing, more trees replants it; the Mitsue Forest Cooperative (御杖村森林組合) does the physical work for both. Reforestation values adopted in [mitsue_forest_workforce_energy_plan.md](#) §9.

A. Partnership shape

- Formal co-developed partnership, or lighter advisory / knowledge-exchange to start?
- Comfortable with a **two-agreement structure** — more trees × village (forest / regional revitalization), our NGO × village (energy / DC), plus a short inter-party MOU?
- Which entity is the **counterparty to the village** for the forest piece — them, us, or joint?
- Any **exclusivity / naming** expectations (e.g. "more trees site")?

B. Reforestation & method

- Confirm method lead: ****local-provenance seedlings + natural planting-arrangement (自然配植)**
 - assisted natural regeneration**. Is Miyawaki / Niwamori dense-planting off the table, or one option per site?
- Who owns **species selection** — them, our NGO, or joint (wildlife-forage priority)?
- Can they run **local-provenance seed-collection & nursery** in Mitsue, or sourced via Odai / Miyagawa?
- View on **harvest-pace vs replant-pace** — can a rotation / mixed sugi regime coexist with their deliberate "dialogue with the forest" cadence?
- **Deer / boar mitigation** — reuse Tenkawa's 12 m reinforced-net enclosures?

C. J-Credit / carbon

- **Attribution:** who owns the credits — more trees, our NGO, or landowners?
- Join their **existing Tenkawa / Odai registration**, or register Mitsue separately?
- Who runs annual **monitoring / reporting**?
- Expected **tCO₂/yr and revenue-split** logic.

D. Education

- Fold their grade-by-grade **seed** → **raise** → **plant** model into our **tree-survey app + Mitsue Elementary program** — one joint curriculum?
- **JUBAKO** office seedling kits as a sponsor / engagement hook — relevant here?
- Tours / site visits — co-run with their existing tour channel?

E. Companies & sponsorship (*largest overlap*)

- Route corporate sponsors through **their Corporate Forest channel**, run our own, or **co-brand**?

- The hook: "**companies sponsoring the forest that powers an AI data center**" — do they want to lead, co-sell, or stay forest-only?
- Any **conflict / overlap in target companies** (their roster is large — SMBC, Salesforce...)?
- Revenue / attribution split on sponsorships that touch both halves.

F. Government & funding

- Will they **sign / co-sign the village agreement**, and does their brand strengthen our subsidy applications (METI GX regional co-creation / MoE zero-emission DC)?
- Do any of **their funding lines** (Mirai Fund, Forestry Agency broadleaf, prefecture) apply to Mitsue's replant?

G. Brand & risk (*theirs to protect*)

- What **sustainability assurances** do they need to put their name on a project that also *harvests* sugi for fuel?
- Any **red lines** — scale of clearfell, compute / energy optics, data-center association?

H. Logistics / next step

- **Next meeting or site visit** to Mitsue? Who from their side attends?
- What do **they need from us** first (one-pager, EVM summary, site data, forest plan §9)?
- Point of contact + cadence going forward.
