Facility/line codes (奈1, 奈A, 京DK, etc.) are Kansai T&D's internal IDs, not place names — left untranslated. Symbol colors follow the translated legend on the previous page (white/black = low curtailment risk, red = no spare capacity / under review, blue = possible curtailment).

Mitsue Village (bottom right, unshaded) has no substations, switching stations, or lines inside its boundary on this map — nearest infrastructure is node 奈AC / 奈38 near Uda City to its west.
