

Quantum Mesh Inc. — Outreach & Evaluation

June 2026 Action Items

Why This Matters

Quantum Mesh Inc. (Quantum Mesh 株式会社) builds containerized, portable edge data centers with liquid-immersion cooling. Their technology and positioning align directly with the Mitsue Village AI Data Center on four points:

1. **KAMUI γ** — an all-in-one micro data center under 1m², suitable for a school-conversion data center build-out (relevant to WP 5.5, ¥20M fitout budget)
2. **PUE of 1.03** — industry-leading cooling efficiency that reduces the biomass CHP load by ~30% vs average data centers, strengthening the circular economy model
3. **Disaster resilience / BCP positioning** — identical narrative to Mitsue's blackout resilience story; independently validated by Ledge.ai national defense/resilience coverage (Jan 2024)
4. **Takahama Town precedent** — Quantum Mesh already deployed a rural DX data center in Fukui Prefecture under a formal municipal agreement; Mitsue is the same model

Their April 2026 partnership with IIJ (Internet Initiative Japan) and NetChart also opens a path to solving the fiber connectivity gap (WP 5.7, ¥10M budget line).

They are backed by and operationally tied to **8M Capital** (<https://8m.fund/>), a financial platform focused on regional infrastructure and the "Watt-Bit-Road" strategy for rural Japan.

Action Items — June 2026

1. Identify the right contact at Quantum Mesh

- Find a named contact via the 8M Capital network or via the Takahama Town municipal agreement press release
- Do **not** use the public contact form as a first approach — a warm intro is strongly preferred
- Check whether Joi Ito or the HIGHRESO network has a connection into 8M Capital / Quantum Mesh

2. Request KAMUI γ pricing and technical specs

- Specifically: KAMUI γ (< 1m² all-in-one unit, launched April 2026)
- Context to share: school building conversion, rural Nara Prefecture, biomass CHP primary power, 24/7 baseload requirement
- Goal: determine whether KAMUI γ fits within the ¥20M data center fitout budget (WP 5.5)

3. Explore IIJ connectivity via Quantum Mesh

- Ask whether their April 2026 IIJ / NetChart partnership extends to small municipal edge deployments
- If yes: assess whether this can replace or reduce the ¥10M fiber connectivity budget line (WP 5.7)

4. Assess 8M Capital as a potential investor

- Determine their minimum investment ticket size and whether they fund village-scale projects
- Ask for an introduction to the investment team if the Quantum Mesh contact is receptive
- Mitsue's current funding gap: ¥28M–¥53M (vs BAC / total budget)

5. Draft a one-page introduction for the outreach

- Lead with the Takahama Town parallel — same model, different prefecture
- Lead energy section with biomass CHP + PUE efficiency angle
- Include disaster resilience / BCP framing to match their positioning

Key Risk

Quantum Mesh's recent deals (IIJ, NetChart, ugo robotics) are scaling toward enterprise and national-grid clients. **KAMUI γ may be enterprise-priced** beyond the ¥20M fitout budget. Get a quote before committing to them in any planning documents or investor presentations.
